

### OPERATIONS MANAGEMENT SOLUTION: INVENTORY MANAGEMENT

#### Overview

A centralized system for monitoring hospital consumables and supplies in real time. Inventory Management provides visibility into stock levels and usage, helping teams prevent shortages and maintain uninterrupted operations.

#### Symptoms

- Limited visibility into supply levels
- Manual inventory tracking processes
- Stock shortages or overstocking
- Delays impacting clinical workflows

#### Solution

- Centralized inventory tracking across departments
- Real-time visibility into consumables and stock levels
- Automated restock and threshold alerts
- Integrated supply data across operational systems

#### Capabilities

- Real-time inventory level tracking
- Automated alerts for low stock or overuse
- Role-based access and permissions
- Integration with operational and procurement systems
- Reporting and audit trails

#### Benefits

- Reduced supply shortages
- Lower waste and overstocking
- Improved operational efficiency
- Better supply reliability
- Seamless alignment with hospital workflows
