

Education institutions regularly conduct research studies that require multiple points of contact with participants over time. Historically, this has meant manual outreach, scheduling, and follow-ups, creating significant administrative workload. The Research Study Management solution digitizes participant sign-up, follow-up, reminders, and long-term updates to simplify and streamline the research workflow.

#### Digital Participant Sign-Up

Participants register through online forms or QR codes, enabling quick, accurate sign-ups without paper-based processes

#### Automatic Follow-Up

After sign-up, participants automatically receive study details, consent forms, and additional information as required

#### Scheduled Reminders

Email and text reminders can be sent for meetings, tasks, or in-person study requirements, based on participant groups or timelines

#### Participant Updates

Researchers can use the same system to share study progress and final results, keeping participants informed beyond study completion

#### Contact Management

All participant information is stored in one place, ensuring accurate records and consistent communication throughout the study lifecycle
