

Universities manage hundreds or thousands of appointments each week across advising, clinics, ethics reviews, and student services. Manually sending confirmations and reminders is time-consuming and increases the risk of missed appointments.

SimplyCast's Appointment Reminders solution automates confirmations, reminders, and reporting, so institutions can manage appointments efficiently without expanding administrative staff.

Digital Appointment Forms

Appointments are booked through online forms that collect required details and store them in a centralized database.

Automated Confirmations

Once booked, students or staff automatically receive confirmation messages with appointment details and pre-visit instructions.

Date-Based Reminders

Reminders are sent automatically based on appointment date and time, with configurable offsets such as days or hours before the visit.

Personalized Messaging

Confirmation and reminder messages personalized to each recipient, including relevant information for their specific appointment.

Reporting & Engagements

After messages are sent, reports show delivery, opens, and confirmation activity to support continuous improvement.

SMART EDUCATION: THE FUTURE OF LEARNING
